SUMMARY OF QUALIFICATIONS

- **Data Engineer** building production **ELT** pipelines and data models using **Python and SQL**, with a focus on data quality and validation of workflows
- **Processed up to 1 TB of financial market data daily** across ingestion, transformation, and downstream analytics
- **Financial market and fixed-income domain knowledge**, including tickers, CUSIP, ISIN, FIGI, LEI/GLEIF, entity resolution, and M&A tracking
- **Data quality and pipeline reliability focus** using Docker, Linux, CI/CD, automated testing, and monitoring, with growing interest in data governance
- **Grounded in an educational background**, I bring a calm, scrappy, and feedback-driven approach to learning new technical domains and independently solving complex pipeline challenges

RELEVANT EXPERIENCE

Left Field Labs — Application Engineer | Remote | June 2025– June 2026 (role impacted due to RIF)

- Improved Google Sustainability reporting accuracy by reconciling five years of complex enterprise data across locations, reporting periods, activity types, and source systems
- Validated ETL transformations during a large-scale migration, identifying and resolving data discrepancies across historical enterprise datasets
- Strengthened data reliability by developing SQL validation queries, reconciling records across enterprise systems, investigating gaps, workflow failures, and documenting data with point-in-time snapshots
- Enabled reliable measurement of user interactions and event traffic by implementing and validating analytics instrumentation across Google I/O web experiences

Hope View — App Engineer | San Diego, CA | Jul 2024 - Aug 2024 (contract)

- Designed structured data models and schema relationships to support reliable local data persistence and retrieval
- Built modular REST API integrations for client-server data delivery, using test-driven development (TDD) to validate functionality

BondCliQ — Data Engineer | Remote | Jul 2022–Apr 2024 (promoted from analyst intern to data analyst engineer)

- Processed up to 1 TB of financial market data daily through ELT pipelines ingesting raw JSON into AWS S3
- Transformed raw JSON using PySpark DataFrames into structured Delta Tables supporting downstream analytics and reporting
- Reduced duplicate and mismatched records by ~20% by developing record-matching and ranking logic across complex financial datasets
- Integrated data from REST APIs, AWS S3, and internal sources into structured workflows supporting business analytics and daily/weekly data updates
- Improved operational visibility and failure detection by developing monitoring dashboards for SFTP data transfers
- Connected financial entities across market data sources by mapping tickers and security identifiers to company records, supporting entity resolution and M&A tracking
- Maintained new-issue bond coverage by identifying and retrieving newly issued securities through Bloomberg Terminal for integration with internal market data

SELECT DATA ENGINEERING PROJECTS

Environmental Monitoring Platform — [link](#)

- **Built a containerized Python/Docker ingestion pipeline** that collects real-time API data, validates payloads, and stores structured measurements in MongoDB for analytics

Rubric Agent - Open Source AI Data Platform — [link](#)

- **Building modular Python ingestion pipelines** that normalize raw educational resources into structured datasets with metadata, provenance tracking, and deduplication

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, Bash

Data & Analytics: Data Modeling, SQL Transformations, ETL/ELT Pipelines, Data Ingestion, Data Quality & Validation, Semi-Structured Data, JSON

Platforms & Databases: PySpark, Databricks, Delta Lake, PostgreSQL

Software & APIs: REST APIs, Flask, Git, Automated Testing, TDD

Cloud & Infrastructure: AWS S3, Docker, Linux, GitHub Actions, CI/CD

Financial Data & Tools: Bloomberg Terminal, Fixed Income, Market Data, CUSIP, ISIN, FIGI, LEI/GLEIF

EDUCATION & CREDENTIALS

B.S. Applied Mathematics — San Diego State University (GPA: 3.5)

dbt Fundamentals — dbt Labs, 2025

Google Data Analytics Certificate — 2022

ASSOCIATIONS

Computer Science Teachers Association (CSTA) — Member since 2015

Hack for LA — Active contributor since 2022
