

Aletia Trepte

San Diego, CA | (619) 707-8130 | aletia.trepte@gmail.com

Summary: Software Engineer with experience building and supporting production software systems using Python, TypeScript, JavaScript, SQL, cloud technologies, and modern web frameworks. Delivered production features for Google I/O 2026, implemented analytics instrumentation, and developed data platforms processing large-scale datasets. Strong foundation in Python, APIs, Linux-based development, software reliability, and cross-functional collaboration.

Professional Experience

Software Engineer – Left Field Labs *Remote, USA · Jun 2025 – Jun 2026 (role impacted due to RIF)*

- Developed and enhanced CMS-driven web experiences using TypeScript, Lit, Tailwind CSS, and Eleventy (11ty) for Google I/O 2026, supporting a globally attended event with high-volume user traffic
- Built, tested, and deployed production software features, collaborating across engineering, design, and product teams to support reliable releases
- Improved accessibility and cross-browser compatibility through keyboard navigation, screen reader support, and reduced-motion accommodations
- Implemented and validated web analytics instrumentation, ensuring accurate event tracking and reporting integrity across high-traffic digital platforms

App Engineer – Hope View *San Diego, CA · Jul 2024 - Aug 2024*

- Developed reusable networking and persistence layers in Swift, improving code maintainability and supporting scalable mobile application development
- Implemented Core Data storage and schema relationships to enable reliable local data persistence and efficient retrieval of application data
- Built modular REST API integrations with Back4App using Swift RequestBuilder and DataFetcher, supporting secure and efficient client-server communication
- Applied Test-Driven Development (TDD) practices to improve code quality, reduce regressions, and support long-term application stability

Data Engineer – BondCliQ *Remote, USA · Dec 2022 – Apr 2024*

- Built and maintained Databricks ELT pipelines using PySpark, SQL, and Delta Lake, processing ~1TB of financial market data daily for trading and market intelligence systems
- Designed and maintained API-driven data ingestion services integrating external financial data providers into AWS S3, improving bond reference-data accuracy and reducing duplicate records by 20%
- Developed observability and monitoring tools to identify latency, failures, and data quality issues, improving dashboard performance and data accessibility
- Automated Python-based reporting and data delivery workflows, reducing manual reporting effort and improving insight delivery

Data Analyst Intern – BondCliQ / Data Glacier *Remote, USA · Jul 2022 – Dec 2022*

- Delivered insights through Sigma dashboards and Python-based analysis, enabling data-driven decision-making for trading and analytics stakeholders
- Built reusable SQL models on Delta Tables to support analytics workflows and reporting across multiple teams

Technical Education and Communication

Engineering & CS Teacher

San Diego, CA · Oct 2017 – June 2025

- Designed and delivered project-based computer science, programming, and data literacy curriculum using Python, JavaScript, HTML/CSS, and related technologies
- Guided hundreds of students through structured problem solving, debugging, and software development projects, strengthening technical communication and mentorship skills
- Collaborated with students, families, administrators, and community partners to identify needs, resolve challenges, and support successful technical learning outcomes
- Built a strong foundation in explaining complex systems, facilitating group problem solving, and collaborating effectively across diverse teams

Technical Skills & Platforms

Languages: Python, JavaScript, TypeScript, SQL

Software Engineering: REST APIs, Git, Docker, Linux, CI/CD, Object-Oriented Programming (OOP), Agile Development, Testing & Debugging

Frontend Engineering: Lit, Tailwind CSS, Eleventy (11ty), HTML/CSS, Component-Based Architecture, Responsive Design, CMS Integration, Cross-Browser Compatibility, Accessibility (WCAG), Analytics Instrumentation

Infrastructure & Networking: SSH, TCP/IP Fundamentals, HTTP/HTTPS, Client-Server Architecture, API Integration

Data & Cloud: AWS S3, Databricks, PySpark, Delta Lake, PostgreSQL, MongoDB, ETL/ELT, Distributed Data Processing

Education

- **B.S. in Applied Mathematics** – San Diego State University

Certifications

- **Google Data Analytics Certificate** — Feb 2022
- **CTE Credential: Information & Communication** — through 2026

Associations

- **Computer Science Teachers Association (CSTA)** — Member since 2015
- **Hack for LA** — Active contributor since 2022
